Digitise Your Entire Logistics Operation From One Platform

From customer bookings and online payments to fleet management, dispatch, live tracking and proof of delivery, Maestro brings every stage of your logistics operation together on one secure cloud platform.

Whether you manage your own fleet, operate a logistics company or run a digital logistics marketplace, Maestro gives you the visibility, control and intelligence to deliver exceptional service while improving operational efficiency.

Built by theSOFTtribe, Maestro is trusted to support organisations across Africa with enterprise-grade technology designed to scale.

One Platform. Complete Control.

Modern logistics extends far beyond managing vehicles.

Customers expect to request services online, receive quotations instantly, pay securely, track deliveries in real time and receive timely updates throughout their journey.

Operations teams need complete visibility over vehicles, drivers, bookings, dispatch, payments and performance.

Maestro brings all of this together in one integrated platform, helping organisations digitise their logistics operations from end to end.

Logistics is Changing

Customers increasingly expect the same convenience from logistics providers that they receive from leading digital platforms.

They want to:

- Request services online.
- Receive timely quotations.
- Pay digitally.
- Schedule collections.
- Track progress in real time.
- Receive notifications.
- Access invoices and receipts.
- Rate completed services.

At the same time, logistics operators must coordinate fleets, drivers, dispatch, compliance and customer service while controlling operational costs.

Managing these processes across multiple systems creates unnecessary complexity.

Maestro replaces fragmented processes with one integrated platform.

What is Maestro?

Maestro is a cloud-based logistics management platform that enables organisations to manage customer bookings, quotations, online payments, fleets, drivers, dispatch, deliveries and operational reporting from one secure system.

Designed for organisations of every size, Maestro combines customer experience with operational excellence to help logistics providers operate more efficiently while delivering exceptional service.

Everything Your Logistics Business Needs

For Shippers and Customers

- Customer Booking
 - Allow customers to request transport and moving services through a simple digital booking experience.
- Online Payments
 - Accept secure online payments through multiple payment channels and automatically reconcile transactions.
- Live Tracking
 - Monitor every active trip with real-time GPS tracking and continuously updated estimated arrival times.
- Customer Notifications
 - Keep customers informed automatically throughout every stage of their booking.
- Billing & Invoicing
 - Generate invoices, issue receipts and maintain complete payment histories.

For Fleet Managers and Drivers

- Fleet Management
 - Maintain complete visibility over vehicles, drivers, documents and fleet utilisation.
- Quotation Management
 - Prepare, review and issue professional quotations before confirming customer bookings.
- Driver Management
 - Onboard drivers, manage licences and monitor driver performance from one platform.
- Trip Planning & Dispatch
 - Create jobs, assign vehicles and drivers, and manage every journey from a central operations dashboard.
- Proof of Pickup & Delivery
 - Capture photos, signatures and delivery confirmations electronically to create a complete audit trail.
- Reporting & Analytics

- Measure operational performance through comprehensive dashboards and management reports.
- API Integration
 - Integrate Maestro with ERP, accounting, HR, CRM and other enterprise systems.

Deliver Better Business Outcomes

Technology should improve business performance—not simply automate existing processes.

Maestro helps organisations achieve measurable operational improvements.

- Improve Customer Experience
 - Deliver a modern digital experience through online bookings, secure payments, live tracking and timely notifications.
- Improve Operational Visibility
 - Monitor vehicles, drivers, trips and customer bookings from a single operational dashboard.
- Increase Productivity
 - Reduce manual administration by digitising dispatch, documentation and operational workflows.
- Strengthen Accountability
 - Maintain complete visibility over every booking, payment, vehicle movement and delivery.
- Reduce Operating Costs
 - Improve fleet utilisation, reduce unnecessary journeys and make informed operational decisions using real-time data.
- Scale with Confidence
 - Whether operating in one city or across multiple countries, Maestro grows alongside your organisation.

Why Organisations Choose Maestro

Unlike traditional fleet management software that focuses primarily on vehicles, Maestro manages the entire logistics operation.

From the moment a customer requests a service until payment is received and delivery is completed, every stage is managed from one integrated platform.

The result is greater visibility, stronger customer service, improved operational efficiency and better business performance.

Who Maestro is For

Maestro is designed for organisations that move people, goods and services.

- **Logistics & Transport Companies**
 - Digitise transport operations from customer enquiry through delivery.
- **Moving & Relocation Companies**
 - Manage residential and commercial moves with online bookings, quotations, payments and live tracking.
- **Courier & Delivery Companies**
 - Coordinate deliveries efficiently while providing customers with complete visibility.
- **Manufacturers & Distributors**
 - Improve delivery performance and fleet utilisation across your supply chain.
- **Government & Institutional Fleets**
 - Increase operational visibility, accountability and reporting across public-sector transport operations.
- **Construction, Mining & Industrial Organisations**
 - Manage large fleets and distributed operations through one secure platform.

Powered by Proven Enterprise Software

Maestro is developed by theSOFTtribe, one of Africa's longest-established indigenous software companies.

Founded in 1991, theSOFTtribe has spent more than three decades designing, developing and supporting secure enterprise software for governments, educational institutions and private sector organisations across Africa.

That experience now powers Maestro—a modern logistics platform built for organisations that expect reliability, scalability and long-term technology partnership.

Ready to Modernise Your Logistics Operation?

Whether you operate your own fleet, manage a logistics company or power a digital logistics marketplace, Maestro gives you everything you need to digitise your operations and deliver exceptional customer experiences.

Platform Capabilities

Maestro provides everything organisations need to digitise their logistics operations—from customer booking and online payments to dispatch, fleet management, delivery and reporting.

Every module is fully integrated, giving your organisation one source of truth across the entire logistics journey.

Features for Shippers and Customers

Customer Booking & Order Management

Make it easy for customers to engage with your business.

Customers can request transport, delivery or moving services through an intuitive online booking experience without making phone calls or completing paper forms.

Key Features

- Online service requests
- Residential and business bookings
- Collection and delivery scheduling
- Multiple pickup and drop-off locations
- Moving and logistics requests
- Item and cargo details
- Photo uploads
- Booking history
- Booking amendments
- Booking cancellation

Benefits

- Improve customer experience
- Reduce manual administration
- Capture complete booking information
- Standardise service requests

Features for Fleet Managers and Drivers

Quotation Management

Respond to enquiries quickly with professional quotations.

Operations teams can prepare quotations based on distance, vehicle type, cargo, labour requirements and additional services before converting approved quotations into confirmed jobs.

Key Features

- Create quotations
- Custom pricing
- Labour and equipment charges
- Additional service pricing
- Validity periods
- Customer approval workflow
- Convert quotation into booking

Benefits

- Faster customer response
- Consistent pricing
- Improved quotation tracking
- Better conversion management

Digital Payments

Accept secure payments through multiple channels.

Customers can pay before, during or after service delivery depending on your business model.

Payment Options

- Credit and debit cards
- Mobile Money
- Bank transfer

- Digital wallets
- Corporate invoicing

Features

- Secure online payments
- Payment confirmation
- Automated receipts
- Transaction history
- Outstanding balance tracking
- Payment reconciliation
- Refund management

Benefits

- Faster collections
- Reduced cash handling
- Improved cash flow
- Better financial visibility

Customer Portal

Give customers complete visibility over every booking.

Customers no longer need to call your operations team for updates.

Customers Can

- * Request services
- * Accept quotations
- * Make payments
- * View booking status
- * Track vehicles
- * Receive notifications
- * Download invoices
- * Download receipts
- * View previous bookings
- * Rate completed services

Benefits

- * Better customer experience
- * Fewer support calls
- * Greater transparency
- * Stronger customer relationships

Fleet Management

Maintain complete visibility over every vehicle in your organisation.

Manage fleet information, documentation and vehicle utilisation from one central platform.

Features

- * Vehicle registration
- * Vehicle profiles
- * Fleet categorisation
- * Vehicle availability
- * Capacity management
- * Insurance records
- * Roadworthy certificates
- * Permit management
- * Vehicle assignment
- * Fleet search

Benefits

- * Better fleet visibility
- * Improved compliance
- * Easier fleet administration
- * Better asset utilisation

Driver Management

Manage drivers throughout their lifecycle.

Features

- Driver onboarding
- Driver profiles
- Licence management
- Identification records
- Driver assignment
- Driver availability
- Driver ratings
- Performance history

Benefits

- * Better workforce management
- * Improved accountability
- * Easier compliance

- * Better driver performance

Trip Planning & Dispatch

Coordinate every movement from one operations dashboard.

Features

- * Trip creation
- * Route planning
- * Pickup scheduling
- * Delivery scheduling
- * Vehicle assignment
- * Driver assignment
- * Cargo management
- * Hazardous goods support
- * Dispatch management

Benefits

- * Faster dispatch
- * Better resource utilisation
- * Reduced scheduling errors
- * Improved operational control

Live Tracking & Fleet Visibility

Know where every vehicle is throughout the journey.

Features

- * Live GPS tracking
- * Vehicle location map
- * Estimated arrival times
- * Route history
- * Trip status updates
- * Vehicle activity timeline

Benefits

- * Better customer communication
- * Faster operational decisions
- * Improved visibility
- * Greater accountability

Driver Mobile App

Everything drivers need in one application.

Drivers Can

- * View assigned jobs
- * Navigate routes
- * Receive new assignments
- * Capture proof of pickup
- * Capture proof of delivery
- * Upload photographs
- * Update trip status
- * Communicate with operations

Benefits

- * Simpler workflows
- * Better communication
- * Reduced paperwork
- * Improved productivity

Proof of Pickup & Delivery

Create a complete digital record of every job.

Capture

- * Photos
- * Signatures
- * Receiver details
- * Date and time
- * GPS location
- * Delivery notes

Benefits

- * Reduced disputes
- * Better customer confidence
- * Complete audit trail
- * Stronger operational accountability

Customer Notifications

Keep customers informed automatically.

Notifications

- * Booking confirmation
- * Quotation ready
- * Payment confirmation
- * Driver assigned
- * Vehicle dispatched
- * Driver approaching
- * Delivery completed
- * Invoice issued

Notifications can be delivered through email, SMS or push notifications.

Billing & Invoicing

Manage the financial side of logistics from the same platform.

Features

- * Generate invoices
- * Issue receipts
- * Credit notes
- * Outstanding balances
- * Customer statements
- * Payment history

Benefits

- * Faster billing
- * Improved collections
- * Better financial control

Reporting & Business Intelligence

Turn operational data into business insight.

Operational Reports

- * Bookings
- * Trips
- * Deliveries
- * Driver activity

- * Vehicle utilisation
- * Distance travelled
- * Revenue
- * Customer activity
- * Payment performance

Executive Dashboards

- * Fleet utilisation
- * Revenue trends
- * Customer growth
- * Driver performance
- * Operational efficiency
- * Financial performance

Benefits

- * Better decision-making
- * Improved profitability
- * Greater operational visibility

Integrations

Connect Maestro with your existing business systems.

Supported Integrations

- * ERP systems
- * Accounting software
- * HR systems
- * CRM platforms
- * Payment gateways
- * GPS providers
- * SMS gateways
- * Email platforms

Open APIs make it easy to integrate Maestro with your existing technology ecosystem.

Enterprise Security

Protect your organisation's data.

Features

- * Role-based access control
- * Secure authentication
- * Data encryption
- * Multi-tenant architecture
- * Audit logs
- * Automated backups
- * High availability
- * Secure cloud hosting

Designed to meet the security and reliability requirements of enterprise organisations.

Built to Scale

Whether your organisation manages twenty vehicles or several thousand, Maestro grows with your business.

Support for:

- * Multiple organisations
- * Multiple branches
- * Multiple countries
- * Multiple users
- * Multiple fleets
- * Multiple currencies
- * Multiple payment providers
- * Multiple customer types

As your logistics operation evolves, Maestro provides the flexibility to expand without changing platforms.

Industries We Serve

Every industry has unique logistics challenges, but they all require visibility, efficiency and accountability.

Maestro is designed to support organisations that move goods, equipment and people, helping them digitise logistics operations from customer booking through to final delivery.

Logistics & Transport Companies

Operate your transport business more efficiently with one integrated platform.

Manage customer enquiries, quotations, bookings, dispatch, drivers, fleet operations, live tracking, proof of delivery and invoicing from one system.

Ideal for:

- * Haulage companies
- * Freight operators
- * Transport service providers
- * Third-party logistics (3PL) providers

Moving & Relocation Companies

Deliver a seamless moving experience for residential and commercial customers.

From online booking and quotations to scheduling, payment, live tracking and proof of delivery, Maestro helps you digitise every stage of the relocation process.

Ideal for:

- * Residential movers
- * Office relocation companies
- * International relocation providers
- * Storage and moving businesses

Courier & Delivery Companies

Improve delivery performance while providing customers with complete visibility.

Manage collections, deliveries, driver assignments and customer notifications through one integrated platform.

Ideal for:

- * Courier companies
- * Last-mile delivery providers
- * Parcel delivery businesses
- * Express logistics operators

Manufacturers & Distributors

Gain greater control over your delivery operations.

Coordinate vehicles, drivers and deliveries while providing customers with accurate delivery information and improving fleet utilisation.

Ideal for:

- * FMCG companies
- * Manufacturers
- * Wholesale distributors
- * Retail supply chains

Construction, Mining & Industrial Organisations

Coordinate complex logistics operations across multiple sites.

Manage heavy vehicles, equipment movement and operational reporting while maintaining complete visibility over field operations.

Government & Public Sector

Improve accountability across government transport operations.

Digitise fleet management, dispatch and operational reporting while strengthening governance and transparency.

Suitable for:

- * Ministries
- * Departments
- * Municipal authorities
- * Public agencies
- * Security services
- * Educational institutions

Why Organisations Trust Maestro

Choosing a logistics platform is a long-term investment.

Organisations need confidence that the platform will continue to evolve, remain secure and be supported by an experienced technology partner.

Maestro is built with that commitment.

Built by theSOFTtribe

Founded in 1991, theSOFTtribe is one of Africa's longest-established indigenous software companies.

For more than three decades, we have designed, developed and supported enterprise software for governments, educational institutions and private sector organisations across Africa.

That experience now powers Maestro.

Enterprise-Grade Security

Your operational data is one of your most valuable business assets.

Maestro is built with security at its core.

Features include:

- * Secure cloud infrastructure
- * Data encryption
- * Role-based access control
- * Multi-tenant architecture
- * User activity logging

- * Automated backups
- * High availability

Built for Growth

As your organisation grows, Maestro grows with you.

Whether you expand into new cities, new countries or new business lines, the platform provides the flexibility to support your evolving operations.

Continuous Innovation

Technology continues to evolve, and so does Maestro.

We continuously invest in improving the platform by introducing new capabilities, strengthening security and enhancing the user experience.

Local Support with Global Standards

Our clients benefit from responsive local support backed by internationally recognised software engineering practices.

From implementation and training to ongoing support, our team works closely with every customer to ensure long-term success.

How Maestro Works

Getting started with Maestro is straightforward.

Step 1 – Discover

Our team works with you to understand your logistics operation, business objectives and implementation requirements.

Step 2 – Configure

Your organisation is provisioned on its own secure Maestro workspace.

Vehicles, drivers, users and operational settings are configured to match your business.

Step 3 – Onboard

We train your operations team, administrators and drivers, helping your organisation transition smoothly to the platform.

Step 4 – Launch

Your organisation begins managing bookings, dispatch, payments, fleet operations and deliveries from Maestro.

Step 5 – Optimise

Use operational dashboards and reporting to identify opportunities for continuous improvement while taking advantage of new platform capabilities as they become available.

Product Roadmap

Our vision is to build one of Africa's leading logistics management platforms.

The following capabilities are currently planned for future releases.

Fleet Intelligence

- * Route optimisation
- * Geofencing
- * Driver behaviour monitoring
- * AI-assisted dispatch recommendations
- * Predictive ETAs

Maintenance Management

- * Preventive maintenance scheduling
- * Workshop management
- * Service history
- * Parts inventory
- * Maintenance costing

Fuel Management

- * Fuel purchase records
- * Fuel consumption analysis
- * Cost-per-kilometre reporting
- * Fuel anomaly detection

Compliance Management

- * Insurance monitoring
- * Licence expiry alerts
- * Roadworthy tracking
- * Permit management
- * Regulatory compliance reporting

Financial Intelligence

- * Profitability analysis
- * Customer profitability
- * Route profitability
- * Fleet operating costs
- * Revenue forecasting

Artificial Intelligence

Future AI capabilities will help organisations:

- * Forecast demand
- * Optimise vehicle allocation
- * Recommend dispatch decisions
- * Identify operational inefficiencies
- * Improve resource planning

Marketplace Enablement

Future releases will provide enhanced capabilities for organisations operating digital logistics marketplaces, including:

- * Carrier onboarding
- * Partner management
- * Dynamic pricing
- * Marketplace settlements
- * Commission management
- * Multi-provider dispatch

Frequently Asked Questions

What is Maestro?

Maestro is a cloud-based logistics management platform that enables organisations to manage customer bookings, quotations, online payments, fleet operations, dispatch, deliveries and reporting from one integrated system.

Who is Maestro designed for?

Maestro is suitable for logistics companies, transport operators, moving companies, courier businesses, manufacturers, distributors, government organisations and any enterprise operating vehicles or logistics services.

Is Maestro cloud-based?

Yes.

Maestro is delivered as secure cloud software, eliminating the need for on-premise infrastructure while providing automatic updates and secure access from anywhere.

Can customers make bookings online?

Yes.

Customers can submit service requests, receive quotations, approve bookings and manage their logistics services through digital channels.

Does Maestro support online payments?

Yes.

Customers can make secure payments using supported digital payment methods.

Can customers track their deliveries?

Yes.

Customers receive live updates throughout the delivery journey and can monitor the progress of their bookings.

Can Maestro integrate with our existing systems?

Yes.

Maestro supports integration with ERP systems, accounting software, HR platforms, CRM solutions, payment gateways and other enterprise applications through secure APIs.

Is our data secure?

Yes.

Security is fundamental to the platform. Maestro uses enterprise-grade security controls, encryption and role-based access to protect organisational data.

Can Maestro support multiple countries?

Yes.

The platform is designed to support organisations operating across multiple locations and markets.

How long does implementation take?

Implementation timelines depend on the size and complexity of your organisation. Our team works closely with each client to ensure a structured and successful rollout.

Do you provide training and support?

Yes.

We provide implementation support, user training and ongoing technical assistance to help organisations maximise the value of the platform.

Ready to Transform Your Logistics Operations?

The future of logistics is connected, intelligent and customer-centric.

Maestro helps organisations replace fragmented processes with one integrated platform that manages customer engagement, fleet operations, dispatch, payments, deliveries and business intelligence from end to end.

Whether you manage a corporate fleet, operate a logistics company or build a digital logistics marketplace, Maestro provides the technology foundation to help your organisation grow with confidence.
